

## Data Analyst – 3 Month FTC

### Description

We are looking for a highly experienced, analytical, and detailed-oriented Data Analyst, who specialises in undertaking and leading comprehensive data quality, process and management reviews (data validation). The role will require a technically skilled report/database developer to support with reviewing and development of complex data outputs and operational and strategic reporting.

The ideal candidate will have a strong background in data analysis, excellent communication skills and a passion for problem solving and driving accurate business insights through data.

You will play a key role in bridging the gap between business data needs and reporting solutions by working closely with stakeholders to gather and analyse data requirements, reviewing existing reports, producing gap analysis, developing data designs, and leading the implementation of data management improvements internally or with 3rd party providers.

### Key Responsibilities

- Collaborate with business stakeholders to collect, analyse and interpret data to understand, elicit and document business data quality issues, anomalies, risks, processes, and requirements
- Lead data validation workshops and subsequent analysis of data sets and reporting to identify opportunities to improve data management processes and data quality constraints and assess these against corporate objectives, complexity, size/scale estimates and VFM
- Develop and maintain reports to track KPI performance and provide insights to stakeholders
- Identify options and propose/design appropriate scalable and efficient solutions for more cost effective and efficient ways of managing data and to improve performance and reliability
- Provide a great customer focussed experience colleagues from proactively capturing business data and reporting requirements and translating these to workable solutions/reports, demonstrating the art of the possible, through to regularly communicating progress on development projects, imparting technical information and training users
- Providing formal handovers to support the ongoing maintenance and reports with high quality technical documentation and support guides and training sessions
- Present findings and recommendations to management based on data validation findings
- Undertaking any other reasonable duties to assist in the management of the project and its service delivery
