Job Description

We're looking for a Data Engineer who'll help to establish an infrastructure foundation on Google Cloud Platform (GCP) and migrate companies' current legacy data lake to a manageable, scalable, and secure data lake in the cloud that can provide the data analytics capabilities necessary to meet their growing needs.

Responsibilities

- Help assess, design, plan, and migrate the existing on-premise or cloud data lake to Google Big Query;

Assess the current system including Flows, Data pipelines, Schemas and reports. Focus on the following areas:

- Data Governance leading practices, definitions, guidelines, process, and recommendations for products available in GCP: Data Catalog, Data Lineage, Data Quality, Data Masking, Data Classification;
- Datasets and analytics infrastructure;
- Database and application technology;
- Extract, transform and load ([ETL](#)) or extract, load, and transform (ELT) workloads;
- Job orchestration and scheduling needs;
- Tooling supply plan (including supporting end of life);
- Plans for continuous integration between applications;
- Business units and other teams using data solutions;
- As-is technical state for the areas analyzed above;
- Desired future-state for data transformation, data lake, or data analytics

Qualifications

- Bachelor's degree in **Business**/**Computer Science** or related field;
- Minimum **3 years** of experience in technologies: **Big Query, Data Flow, SQL and Python**;
- Experience in **migration data warehouses to Big Query**.
- Knowledge of **English Language** on at least **B2+**/**C1** level.
