# Machine Learning Solutions Architect

# Description

Provectus helps companies adopt AI to transform how they operate, compete, and drive value. The company focuses on building ML Infrastructure to drive end-to-end AI transformations, assisting businesses in adopting suitable AI use cases, and scaling their AI initiatives organization-wide in such industries as Healthcare & Life Sciences, Retail & CPG, Media & Entertainment, Manufacturing, and Internet businesses.

Join us if you have the same passion for making products using AI/ML technologies, cloud services, and data engineering. Join us if you value a friendly corporate environment and almost a family-driven approach to every employee. Join us if you want to grow professionally and be ready to learn new things constantly.

As an ML Solution Architect, you'll be provided with all opportunities for development and growth.

# **Responsibilities:**

- Provide technical support on pre-sales and sales calls with new customers, including investigating business problems, representing Provectus technical expertise, and offering solutions. Conduct and drive technical workshops for new and existing customers.
- Create machine learning solutions, including problem framing, exploratory data analysis, dataset preparation, model & algorithm development, model training & evaluation, model deployment, monitoring, and maintenance.
- Implement architecture to deploy machine learning pipelines and CI/CD processes.
- Estimate development, maintenance, and other costs for the proposed solutions.
- Act as a technical liaison between customers and teams to provide customer-driven product improvement feedback.
- Stay abreast of new tools, packages, and Machine Learning techniques while consistently pushing the limit of what is possible to deliver the best solutions for clients.
- Evangelize ML services and share best practices through blogs, white papers, reference architectures, public-speaking events, etc.

# **Requirements:**

- Experience in designing and implementing models or machine learning algorithms in production, including problem framing, exploratory data analysis, dataset preparation, model & algorithm development, model training & evaluation, model deployment, integration, monitoring, and maintenance.
- Consulting experience and track record of helping customers with their Al needs.
- Ability to lead exploratory data analysis within new subject matter experts or new data sources.
- Strong knowledge of Python able to write production-level code that is wellwritten and explainable.
- Experience with SQL, NumPy, pandas, scikit-learn, HuggingFace transformers, and MLFlow.
- Knowledge of <u>MLOps</u> or CI/CD best practices.

#### Hiring organization Candidate-1st

Employment Type Full-time

Beginning of employment asap

Job Location Serbia

Working Hours

Base Salary euro USD 60K - 112K \*

#### Date posted

May 18, 2024

# **Preferred skills:**

- Industrial experience with LLM and related frameworks (LangChain, LLamaIndex, etc.)
- Practical experience with AWS (or alternatives from other major clouds):

- Amazon SageMaker. - Amazon Redshift, EMR, or Glue.- Core services: S3, networking, IAM, ECR.

- Knowledge of Apache Spark or Ray framework.
- Practical experience with at least one deep learning framework like <u>PyTorch</u> or TensorFlow.

#### How the process will look like

Your teammates will gather all requirements within our organization. Then, once priority has been discussed, you will decide as a team on the best solutions and architecture to meet these needs. In continuous increments and continuous communication between the team and stakeholders, you're part of making data play an even more important (and understood) part withing Brand New Day.
