Senior Market Data Developer

Description

ABOUT BMLL:

We are a historical data and analytics company, solving some of the most complex and challenging problems in big data and financial markets. We have built an award-winning data analytics platform for processing vast quantities of granular limit order book data and are in the process of productising this platform.

We have a fantastic team and our culture is inclusive and highly collaborative, a place where our employees are encouraged to be themselves.

We give all our employees share options, empowering them to get involved in decision-making and help shape the future of our company as we continue to grow and scale.

We offer a combination of remote and office (London-based) working, weekly team lunches and plenty of office snacks!

About the Role:

At BMLL we process financial data in a process we call parsing. We continually add new financial datasets to our platform whilst upgrading and improving existing ones. Parsing occurs in well defined data pipelines built using a distributed architecture. The engineering of the pipeline is as important as the data transformation process, and we are constantly working to improve its performance and reliability. We curate the data to ensure the highest quality of delivery to our customers. Every day we consume over 250GB of new data across 750,000 securities to deliver into our platform, our dashboard products and data services. These are accessed by our customers who are dependent on our services for their own workflows.

The majority of our data processing code is written in C++, and Python is used extensively in orchestrating workflows and managing reference data.

We are looking for a Senior Developer to build and maintain data parsers that ingest and process market data and reference data, improve processes and reliability for managing these large datasets using the latest AWS technologies, and become an expert in understanding the data and the way we curate and process it.

This is an opportunity to join a cutting-edge FinTech company with the potential to grow your technical, finance and cloud- & data-engineering skills.
