

## Business Intelligence Analyst in Large Corporates and Institutions Analytics Team

### Description

We want you to join our team as a BI Analyst and help our area become more efficient in keeping the financial sector a fair place!

LC&I Analytics is a data analytics team helping drive Financial Crime Prevention (FCP) area's data agenda for our business unit. You will be working with 5 other colleagues: 2 Data Engineers, 3 BI Analysts, and a technical team leader to support a function of over 400 employees in their work. Our team is creating value for all levels of stakeholders in the area, from performance management reporting for team leaders to customer deep-dive tools and dashboards for all FCP KYC LC&I employees.

As a team, we aim for high automation deliveries to ensure we only work on value-adding activities, hence, as a Business Intelligence Analyst, your daily work will never be boring – you will be making improvements and driving us forward every day. You will be building reports, extracting data, and being a true business partner to our close stakeholders.

In collaboration with colleagues in the FCP area, you will be coming up with solutions to automate decisions by using data. You will design self-service dashboards to bring your data insights to life. Occasionally, when existing dashboards do not cover one-off specific needs, you will work on ad-hoc requests such as the aggregation of a specific pool of customers, impact assessments, and deep dives into particular topics within FCP to enable data-based decisions and targets.

Depending on your experience, you may be offered a different seniority of the role.

### You will:

- Design and develop Tableau dashboards for various reporting projects
- Collaborate with stakeholders, understand and log their business needs, and use your findings to create appropriate business logic by using data in Microsoft SQL Studio database
- Work closely with your team members to handle various complexity ad-hoc requests from the area, from extracting current data points from the area's statistics to simulating 'what-if' scenarios on the customer portfolio
- Act as the main responsible person for a portion of the team's reporting portfolio, gathering additional requirements, prioritising improvement tasks, and adding enriching features based on priority and value
- Drive the team forward by gathering new ideas to bring our shared responsibilities to an even higher level of quality
- Identify appropriate external data sources, validate the data, and collaborate with the team to onboard the data into our data warehouse, and optimise queries for best efficiency
- If desired, participate in data warehouse design, integration, and maintenance

### About you:

If you are someone that is driven by a mission and truly enjoy working with data, you will pique our interest!

To excel in such a role, you are expected to be solution-oriented and have strong communication skills working with different stakeholders who trust your data expertise.

- Have 1+ years of experience working on analytical tasks
- Analytical and curious thinker, excited to collaborate with your team to achieve a collective end product
- Good SQL querying skills and the ability to create efficient data sets for reporting
- Experience in building effective data visualisation solutions on Tableau (or other data visualisation software such as PowerBI, Qlik, etc.) would be very beneficial
- Upper-Intermediate English language skills (both spoken and written)
- Great problem-solving abilities, a good work ethic, and a proactive approach to challenges
- Proven collaboration skills and the capability to drive conversation and understand requirements from non-technical audiences and stakeholders
- Higher education in Mathematics, Economics, Management information systems, or other fields contributes to your professional profile

“Be yourself. We like it that way.”
