

Senior Business Intelligence Analyst

Description

What you'll be doing...

The role sits within the Business Intelligence team within Future. The team is guiding the business to become more data-driven.

Future operates in a fast changing landscape and our ability to adapt faster than the competition to changes in the market provides commercial advantage. Teams and companies who have visibility of objective performance data are able to make swift changes to achieve a greater level of performance.

We believe data is fundamental for decision making. However, more than just having data, you must also make sense of it. We want to help provide insights in a format which is consumable and reflects the commercial context.

Our vision is not just to provide reporting but to help us become a more intelligent organisation.

Join our Future Business Intelligence team as a Senior Business Intelligence Analyst, where you'll play a key role in enhancing performance across the business. Collaborate closely with business teams to explore commercial opportunities and contribute to essential projects that support our strategic initiatives.

This role sits at the intersection of our data and business functions, offering a chance to work closely with decision-makers. Responsibilities include providing insights to senior stakeholders, addressing commercial data challenges, identifying market trends, and uncovering new commercial data opportunities. It's a role that combines analytical expertise with business insights in a dynamic work environment.

Experience that will put you ahead of the curve...

- Experience with keyword research, competitor analysis and the monitoring and reporting of audience trends
- Ownership of SERP analysis and deriving actionable insights that drive tactical and strategic business change
- Highly proficient with Google Search Console, Google Analytics and Google Sheets/Excel
- Experience creating reporting output from a range of different and disparate data sources
- Strong communication and presentation skills to effectively convey insights to both technical and non-technical stakeholders
- Knowledge of or aptitude to learn about BI principles, specifically with BigQuery, SQL, Looker / Looker Studio a plus
- Apply design thinking principles in an agile environment
- Product mindset and ability to effectively gather requirements from business stakeholders
- Curiosity, a hacker mindset and a proactive attitude and the drive to make the organisation more data-driven
