AI Software Engineer (C++/GPGPU) – 6 Month Contract

Description

Position Summary

The AI team at Samsung Research UK is looking for exceptional engineers to join the growing team in Staines-upon-Thames. The team undertakes projects involving the application of cutting-edge research into proof-of-concept and commercial products for Samsung devices and services. The prospective candidate will have the opportunity to be part of building next generation mobile devices from Samsung. The candidate will contribute to research and development of technology for on-device AI for their deployment on Samsung's flagship mobile devices.

The ideal candidate will have experience and expertise in both GPU compute programming and systems development (library development, performance/memory optimizations) using modern C++. The prospective candidate will work on and grow in both directions. This position will require the candidate to work closely with researchers and engineers to enable and accelerate new research efforts for on-device AI. LLVM experience will be a plus.
