

## Cybersecurity Manager in Brno

### Description

Our partner helps customers in the field of fasteners and offers an ever-expanding range of industrial products, tools and safety products from renowned manufacturers. Our main customers include machinery and equipment manufacturers (OEMs) and repair and maintenance (MRO) companies, for which, in addition to quality products and services, we also provide comprehensive supply solutions (VMI) and the smooth running of their businesses.

### The Role

The Cyber Security Manager will be responsible for establishing and managing their organization's cyber security program. This includes implementing policies and procedures, educating staff, coordinating with different departments, and ensuring that their network and data are secure from threats. The ideal candidate will have a strong understanding of the latest security principles, techniques, and protocols.

### Responsibilities

#### Job Responsibilities

- Develop, implement and monitor a comprehensive enterprise information security and IT risk management program.
- Work directly with the business units to facilitate risk assessment and risk management processes.
- Vendor Security management – Security assessment prior to onboarding and periodic review of existing critical suppliers, including the assessment and treatment for risks that may result from partners, consultants and other service providers.
- Functional administration of Security tools like Web security, Email security tool, etc
- Establish security procedures and recommendations in collaboration with the IT leadership team.
- Oversee security partners to ensure services are delivered according to the agreement, and assist with decision-making processes.
- Responsible for approving operational security measures including modifications to firewall rules, web filtering parameters, API regulations, etc.
- Develop incident response plans and conduct drills to ensure the preparedness of the team.
- Facilitate information security training and awareness programs to educate employees about the risks.
- Anticipate new security threats and stay-up-to-date with evolving infrastructures, and keep the management informed about these threats and vulnerabilities.
